

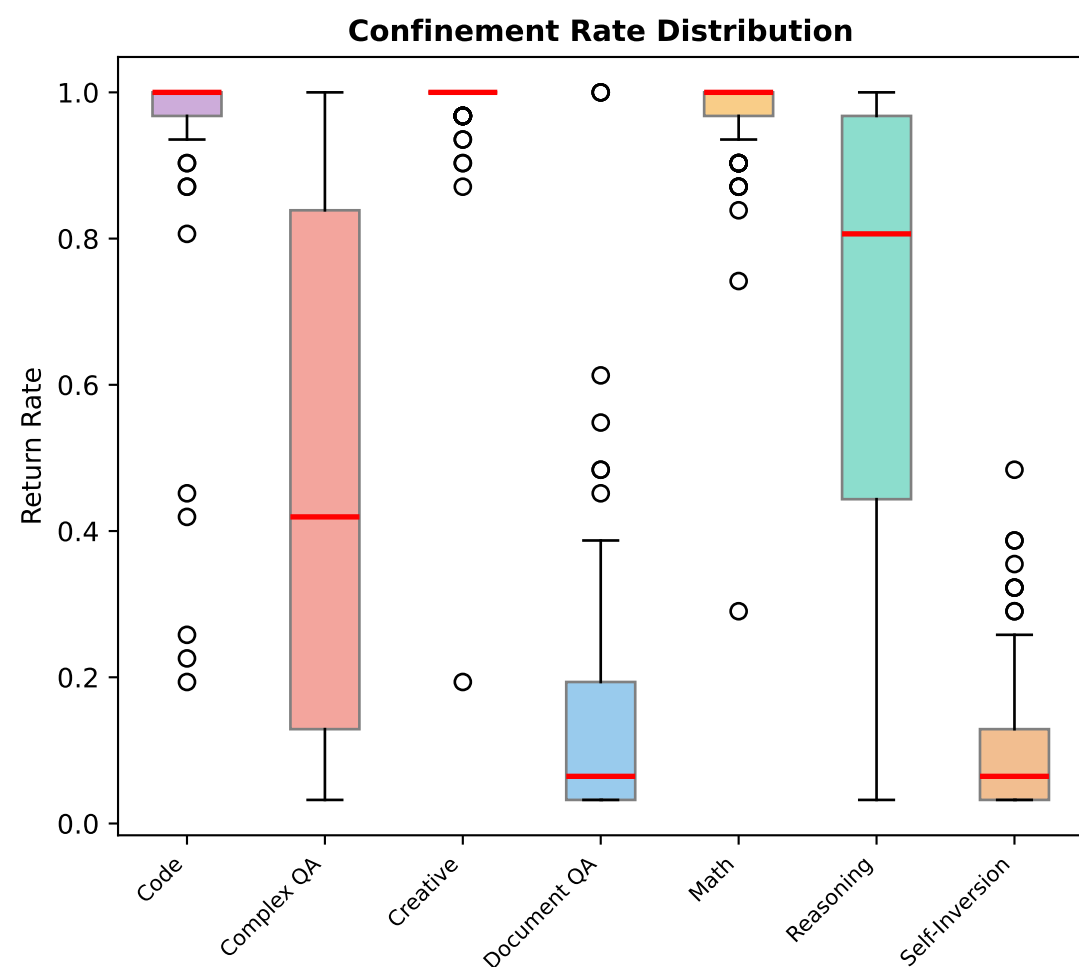

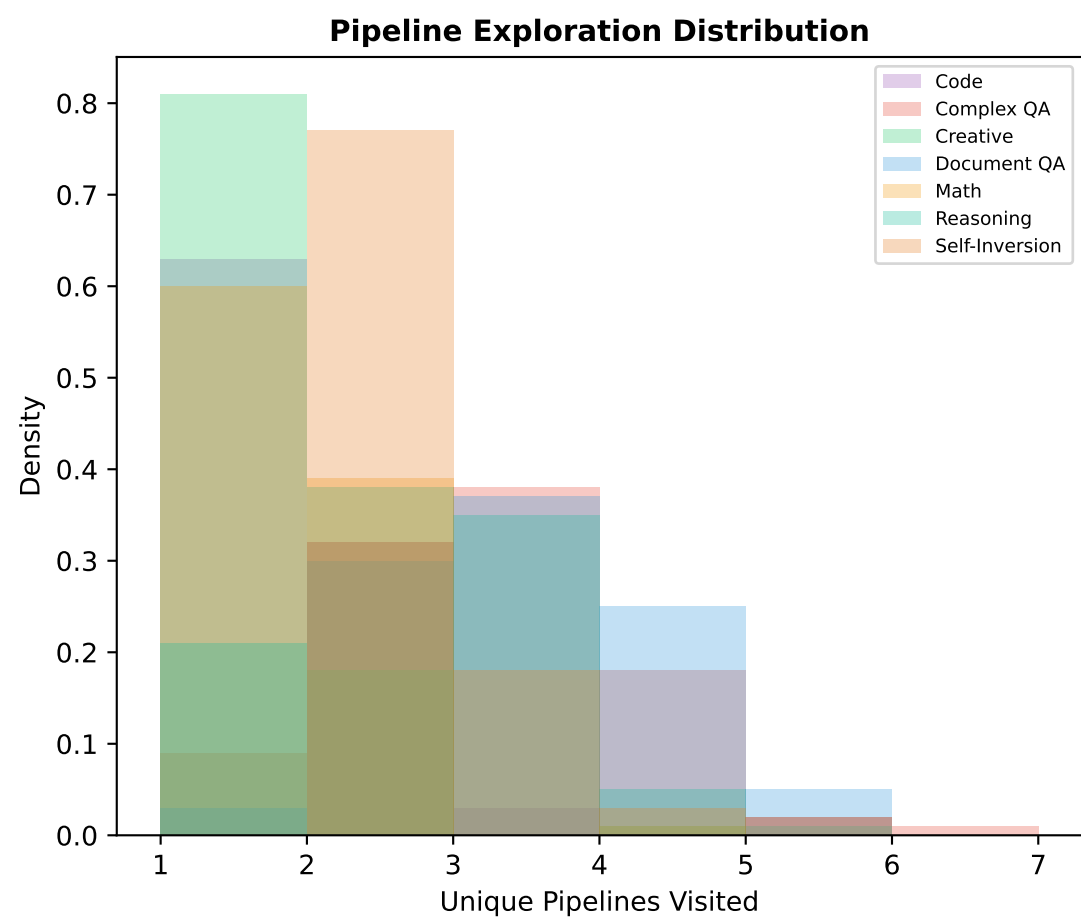

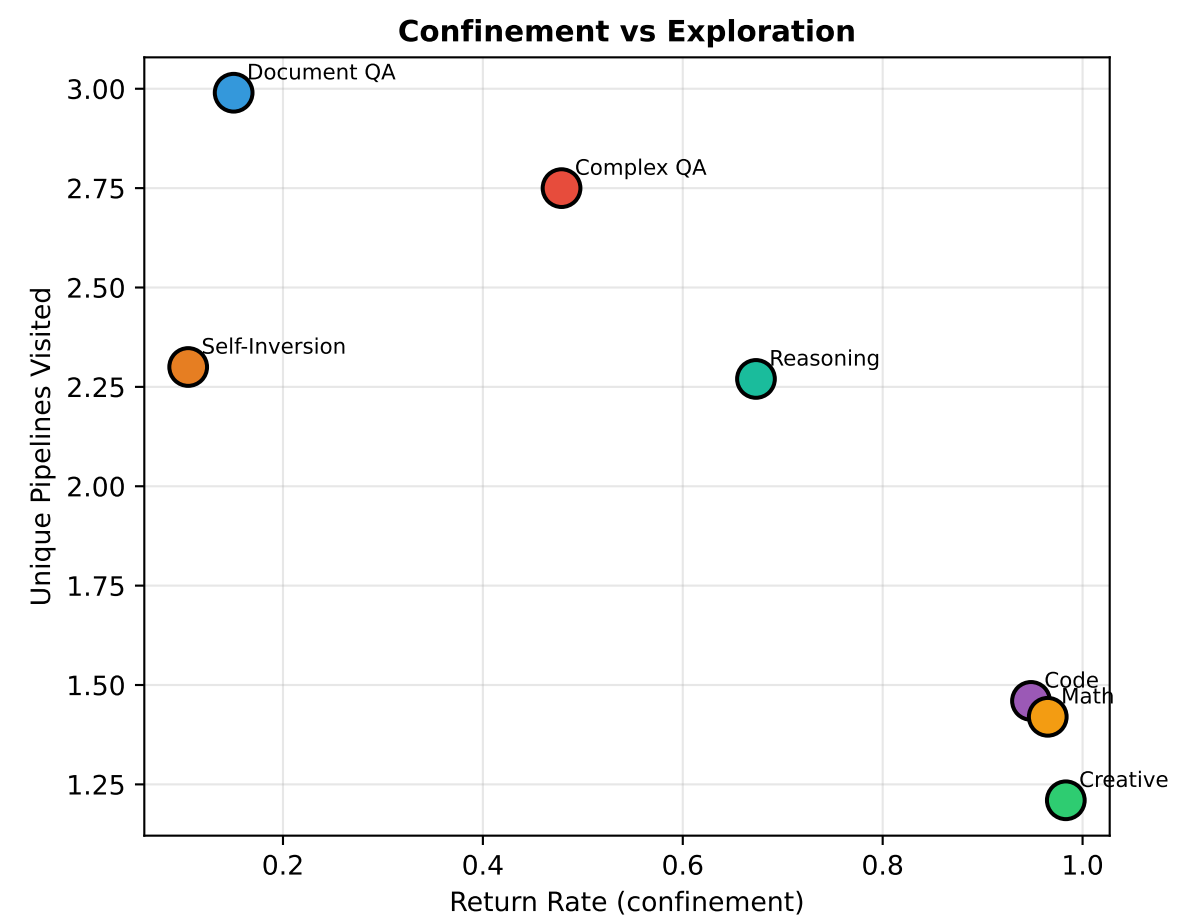

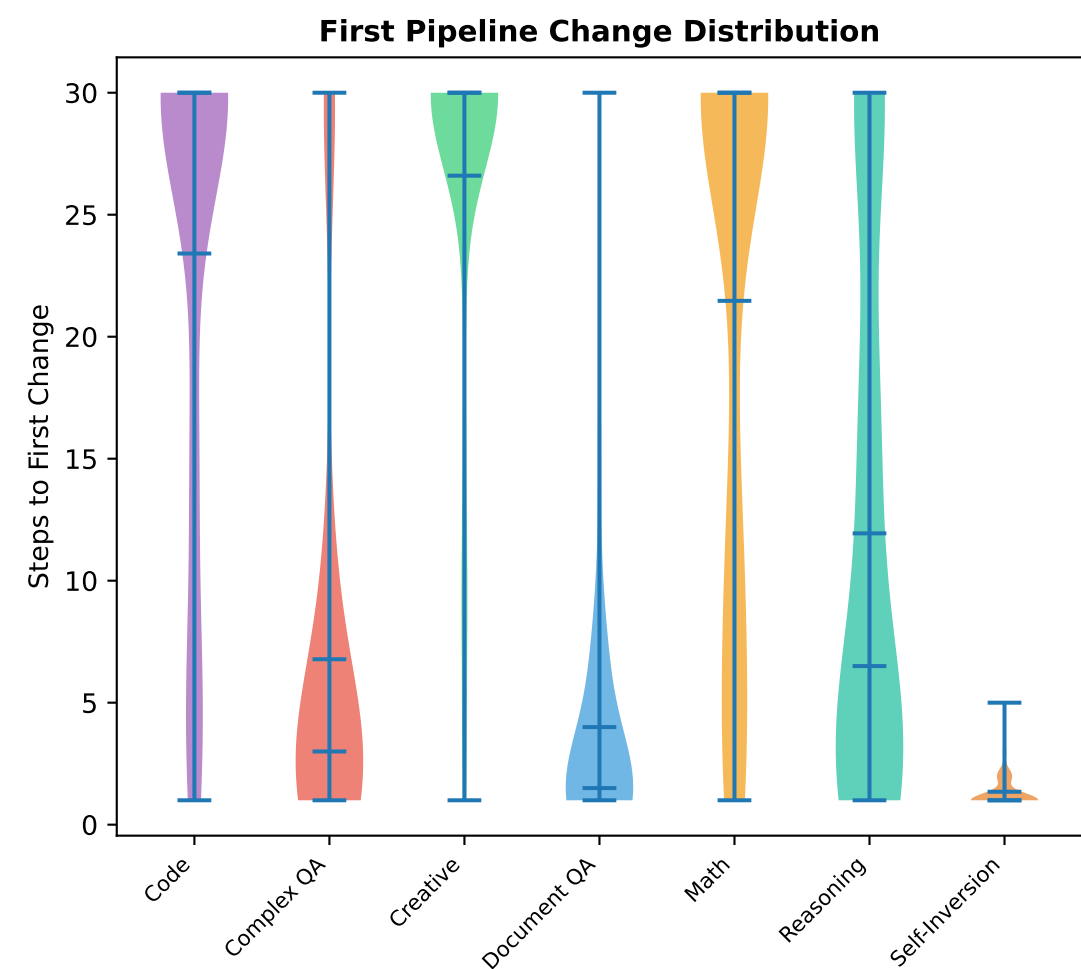

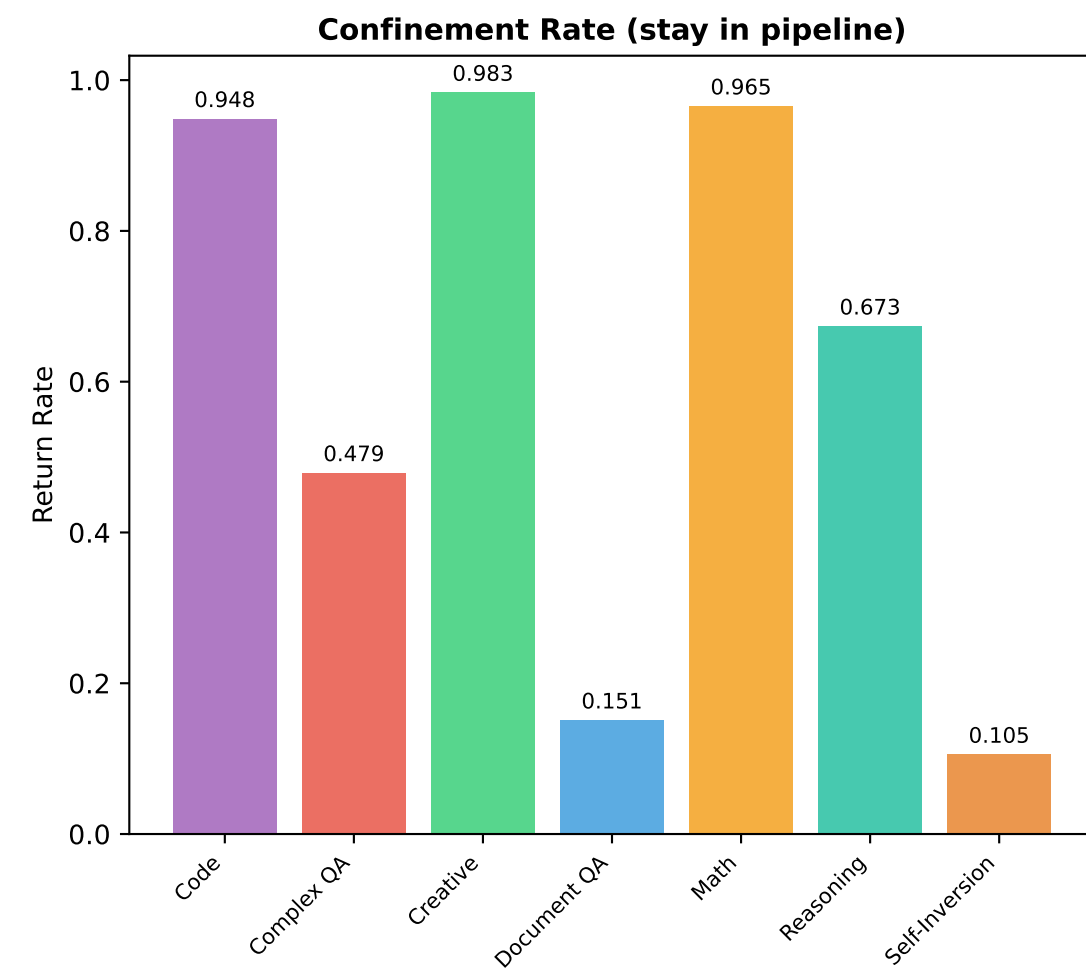

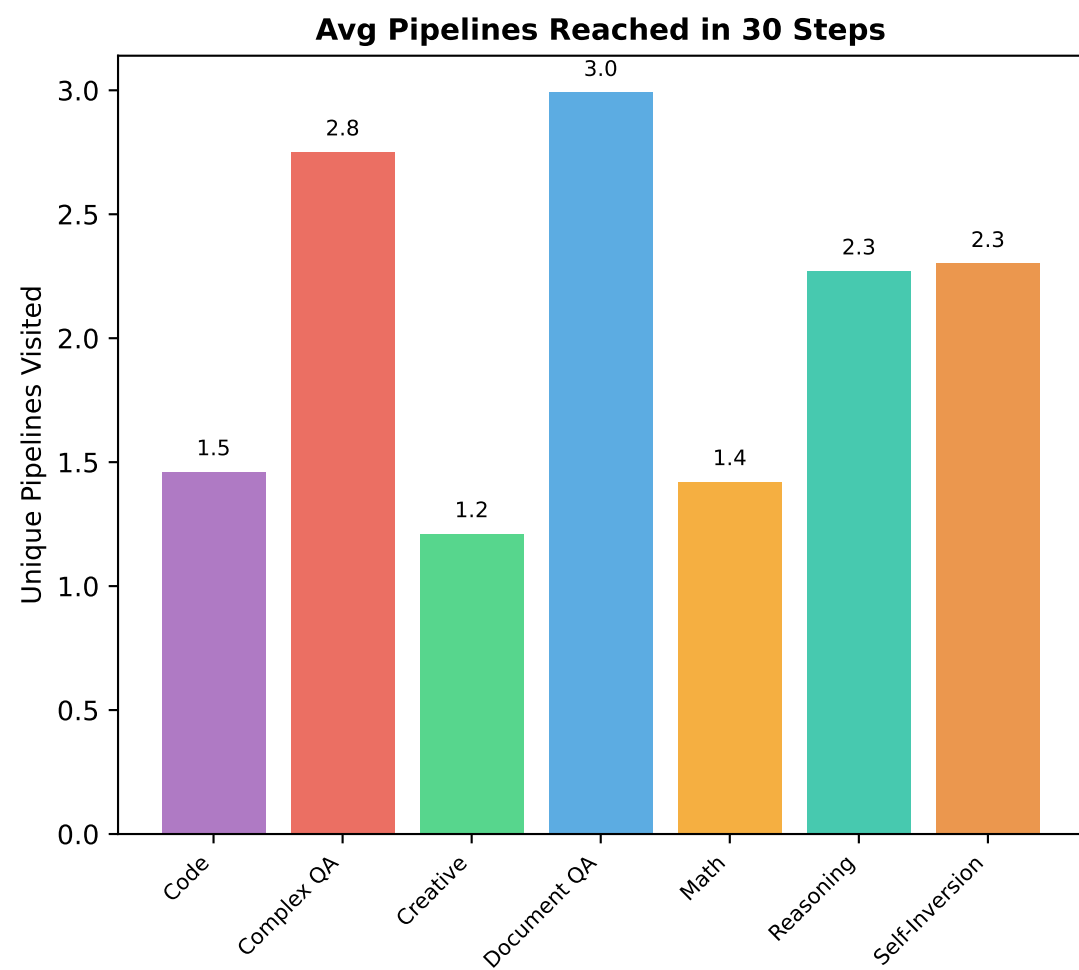

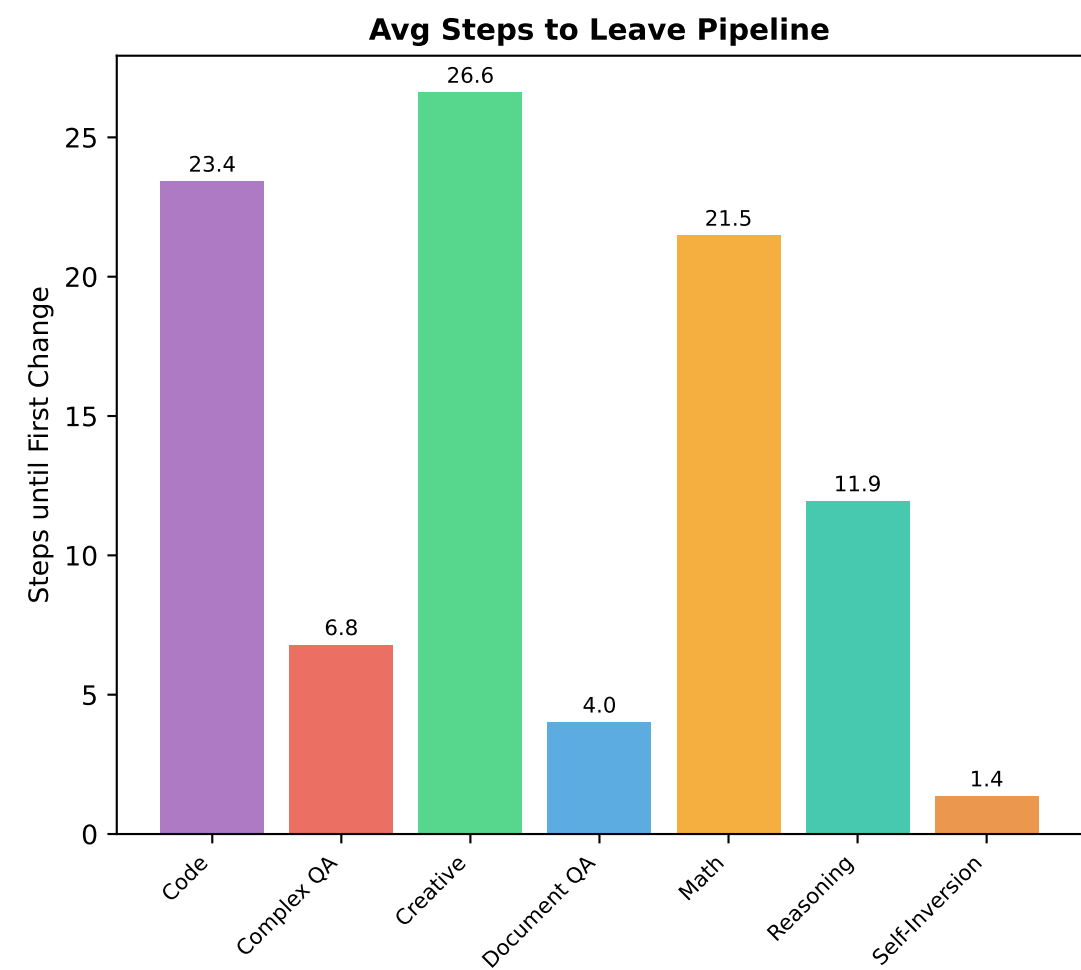

Fig 184: Embedding Space Random Walk Analysis

Random Walk Analysis Summary

Walk params: 100 walks × 30 steps × K=5

Most confined: Creative
(return rate: 0.983)

Most exploring: Self-Inversion
(return rate: 0.105)

Fastest to leave: Self-Inversion
(1.4 steps avg)

Slowest to leave: Creative
(26.6 steps avg)

Key Insights:

- Code/Math most self-contained
- Self-Inversion explores most broadly
- Walk diversity confirms isolation scores
- Pipeline boundaries are soft (gradual)
