

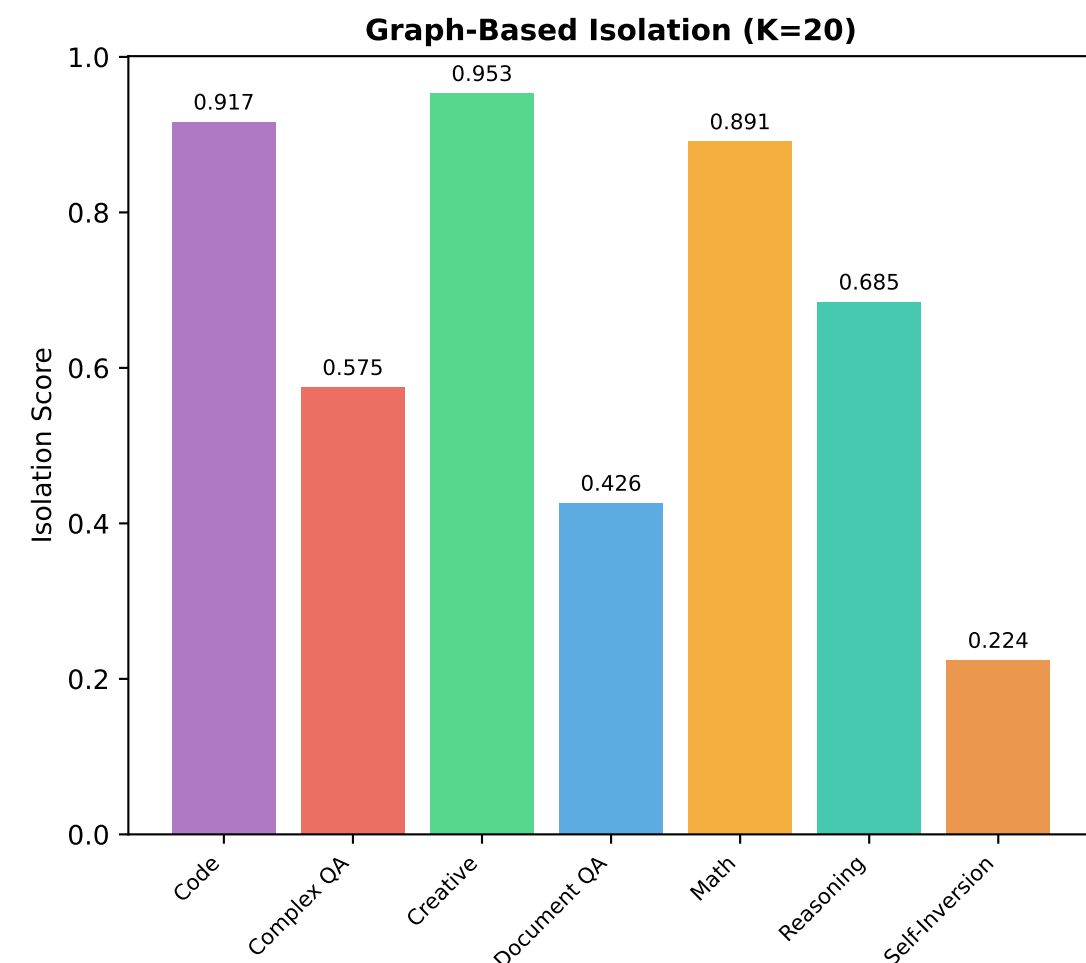

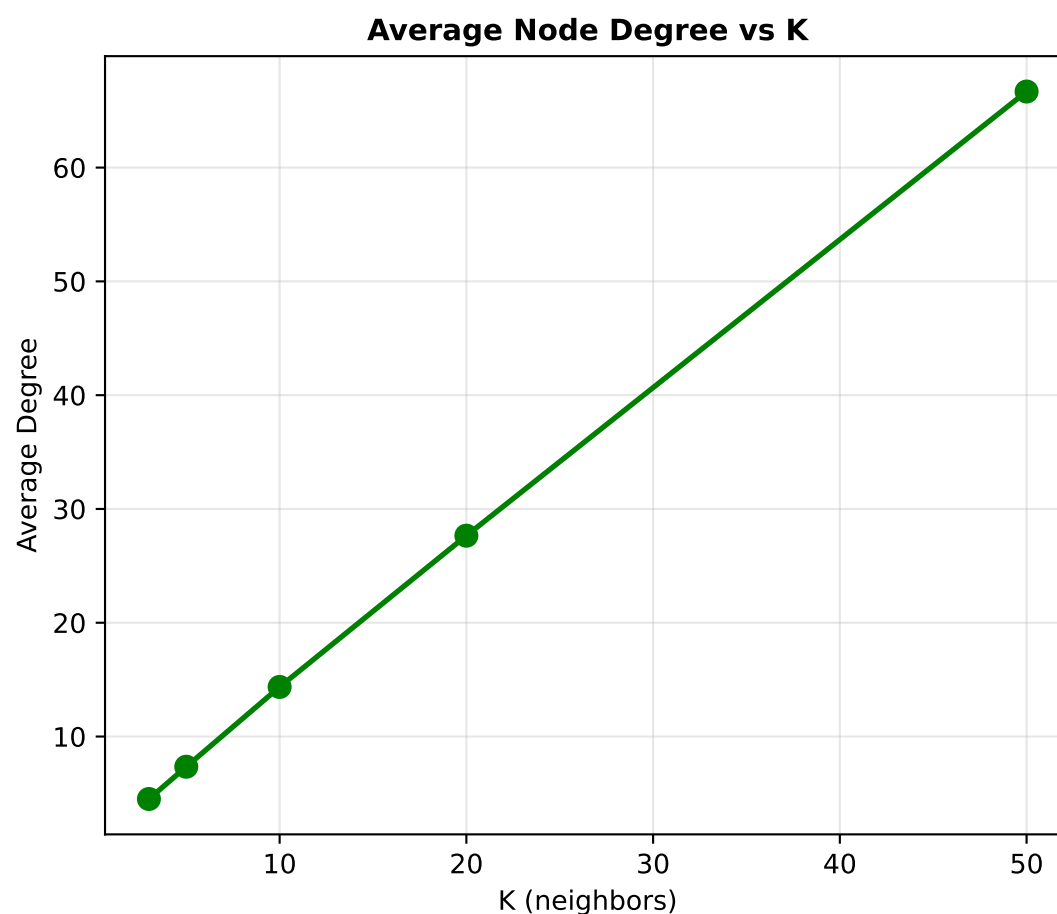

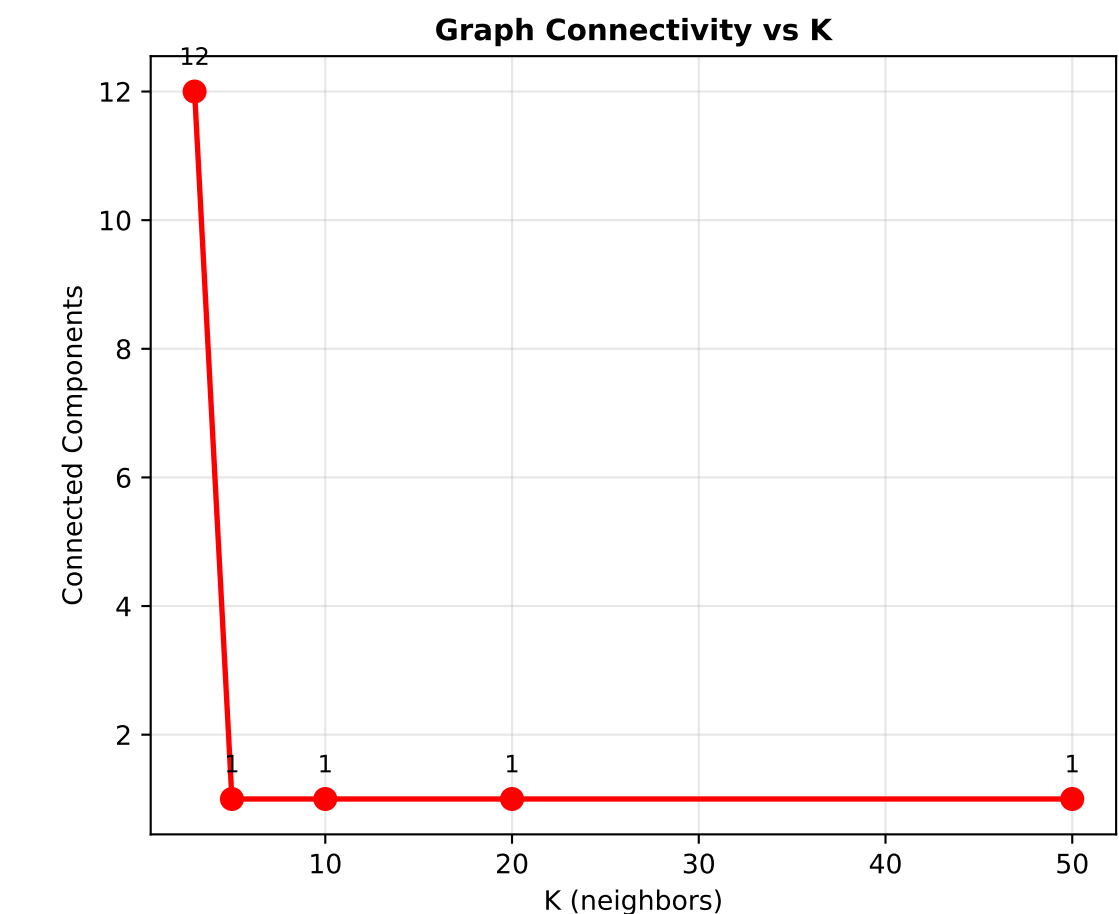

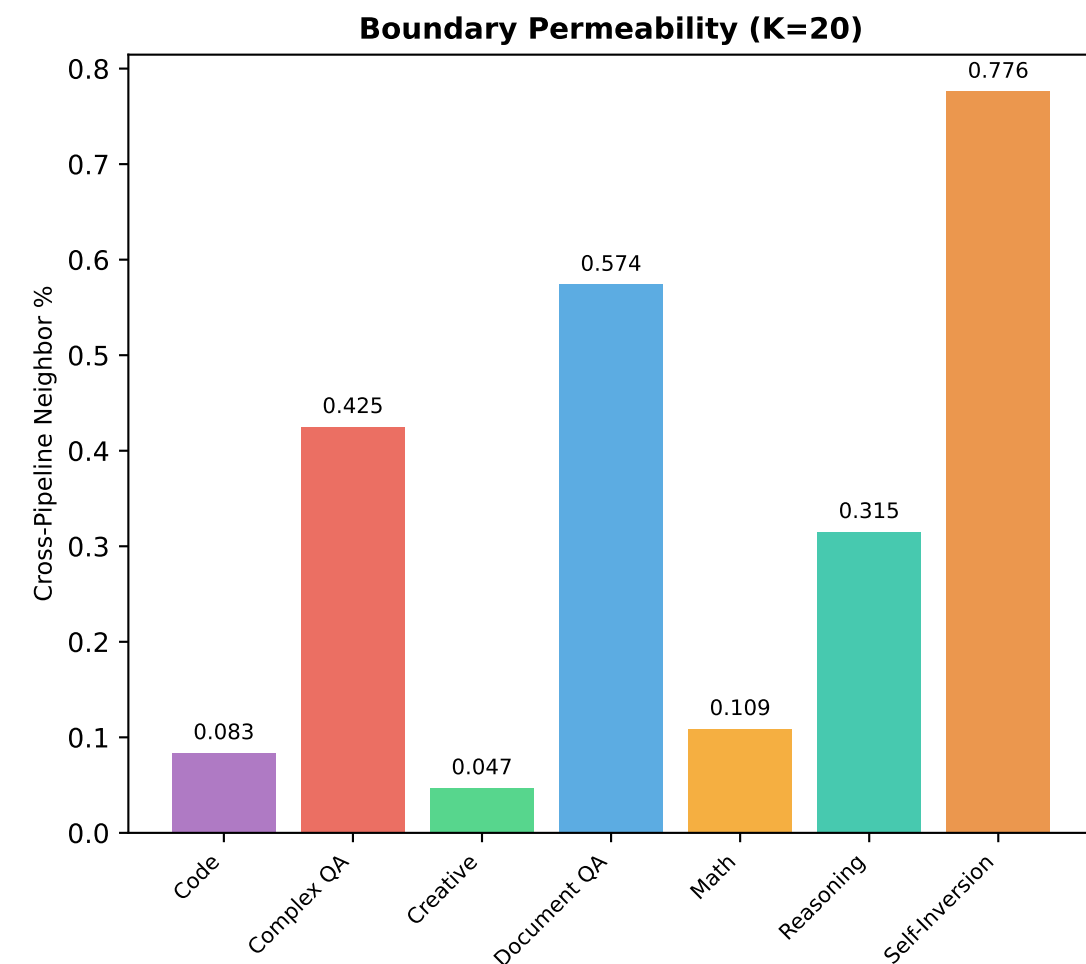

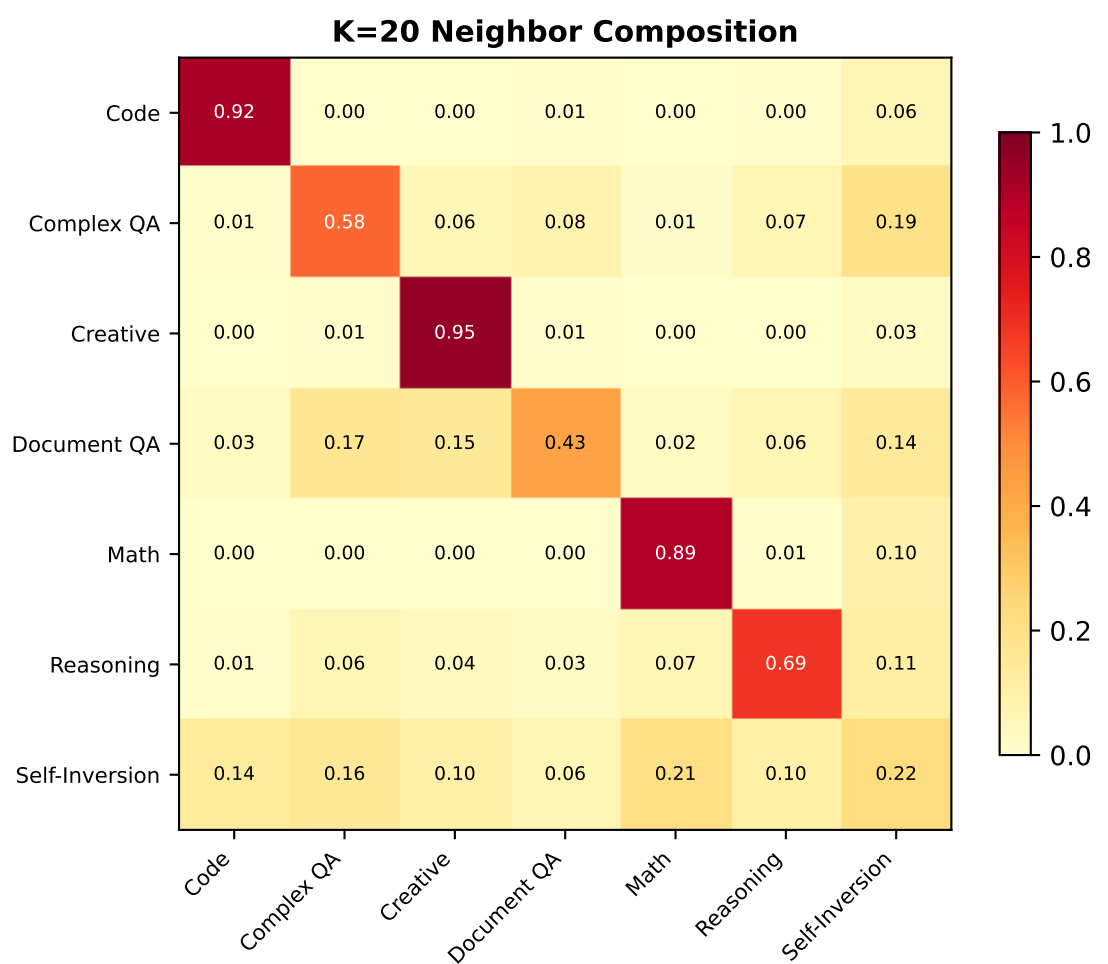

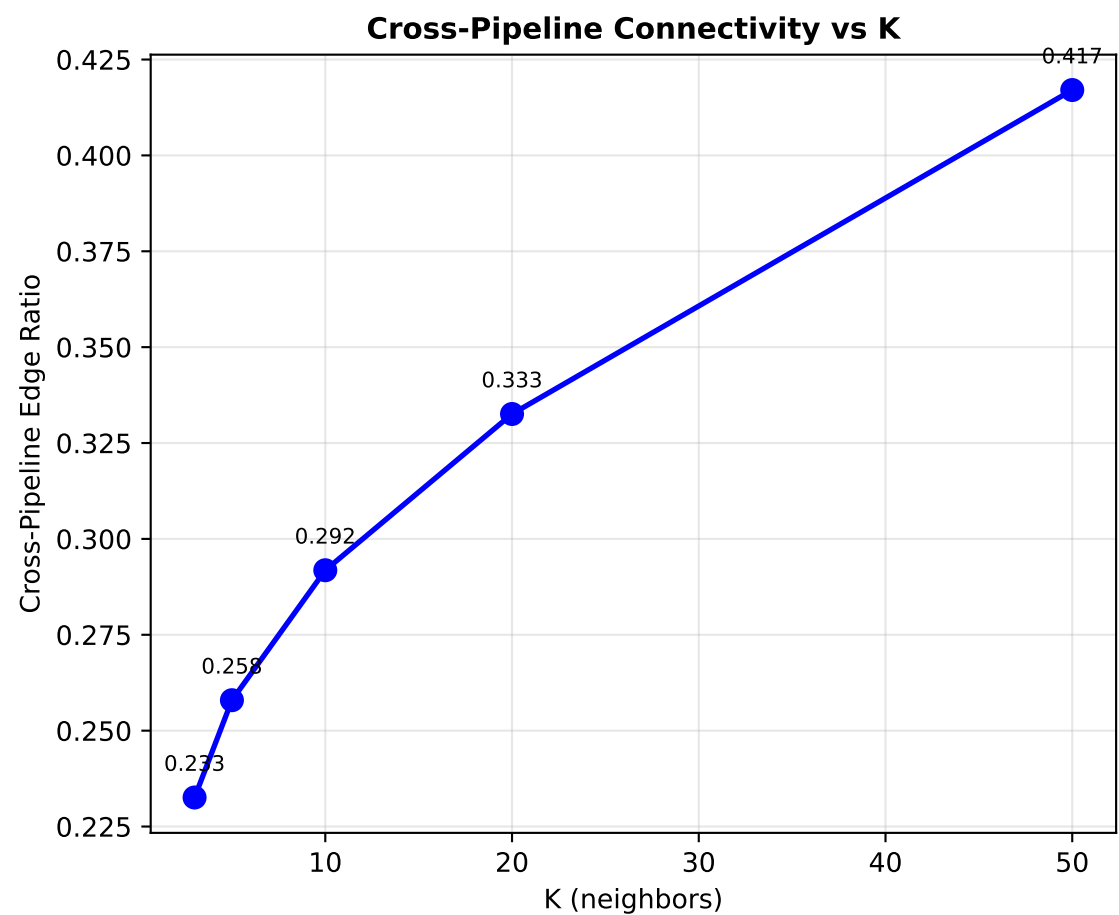

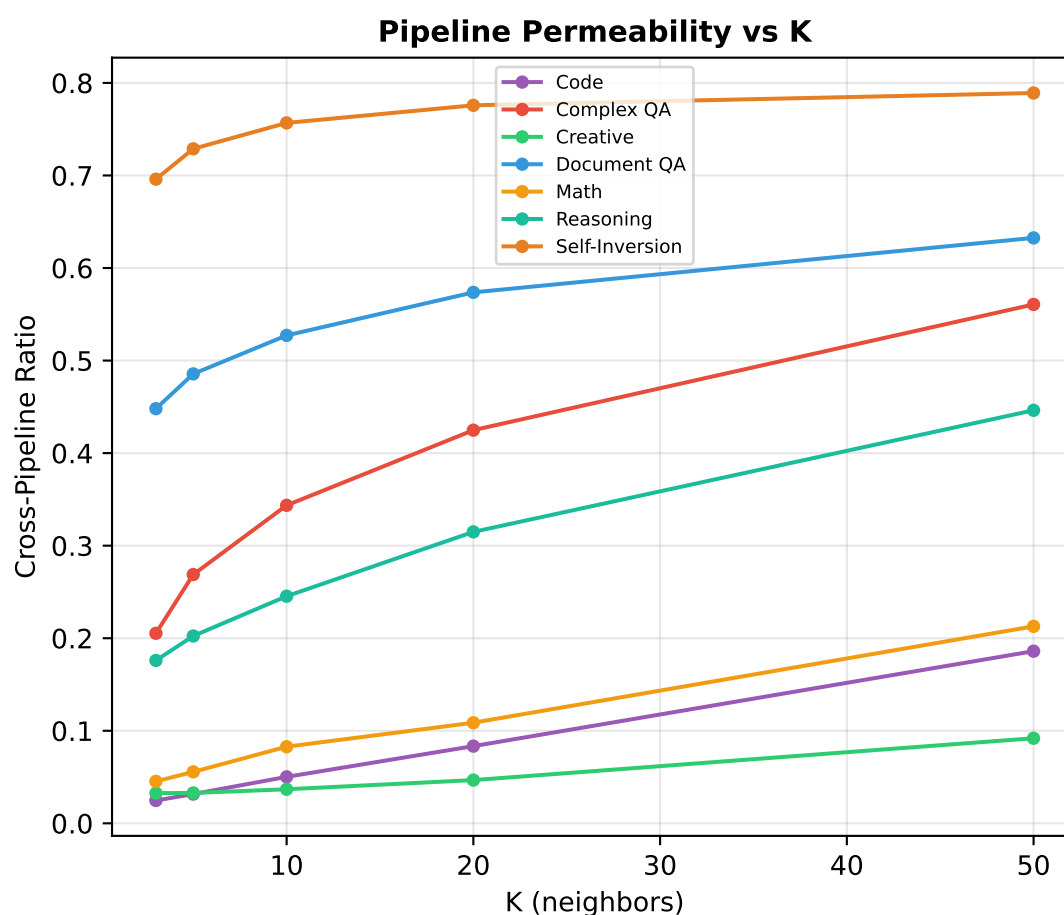

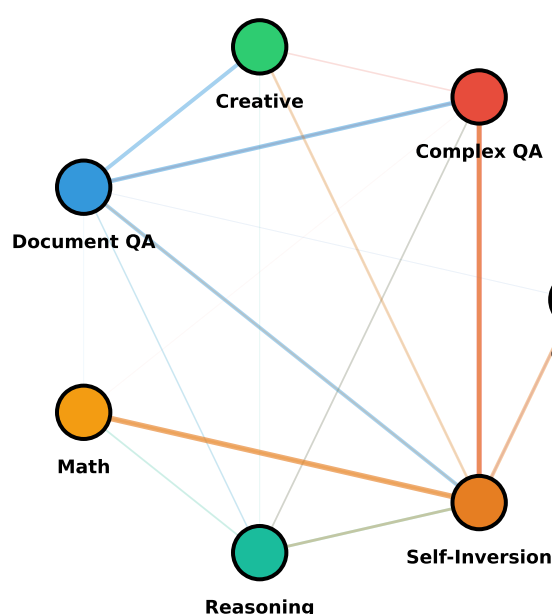

Fig 185: KNN Graph Connectivity Analysis

Cross-Pipeline Flow Network (K=20)

Graph Connectivity Summary (K=20)

Overall cross-pipeline ratio: 0.333
Connected components: 1
Average degree: 27.7

Most isolated: Creative (isolation=0.953)
Most connected: Self-Inversion (isolation=0.224)

Key Findings:

- Self-Inv/DocQA most permeable
- Creative/Code most self-contained
- Full connectivity at K>=3
- Cross-ratio plateaus ~0.417
- Graph structure confirms embedding space topology
