

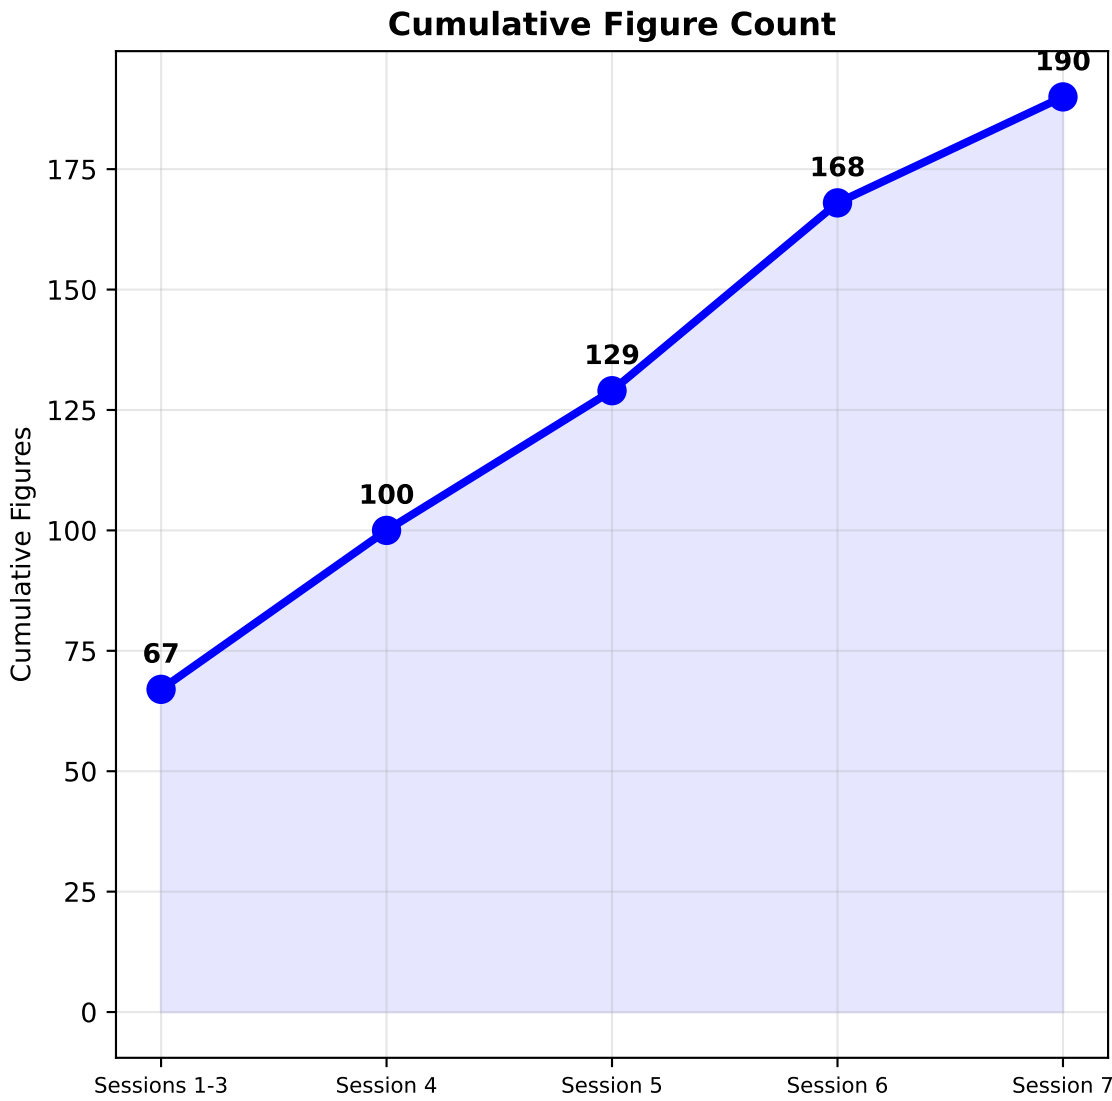

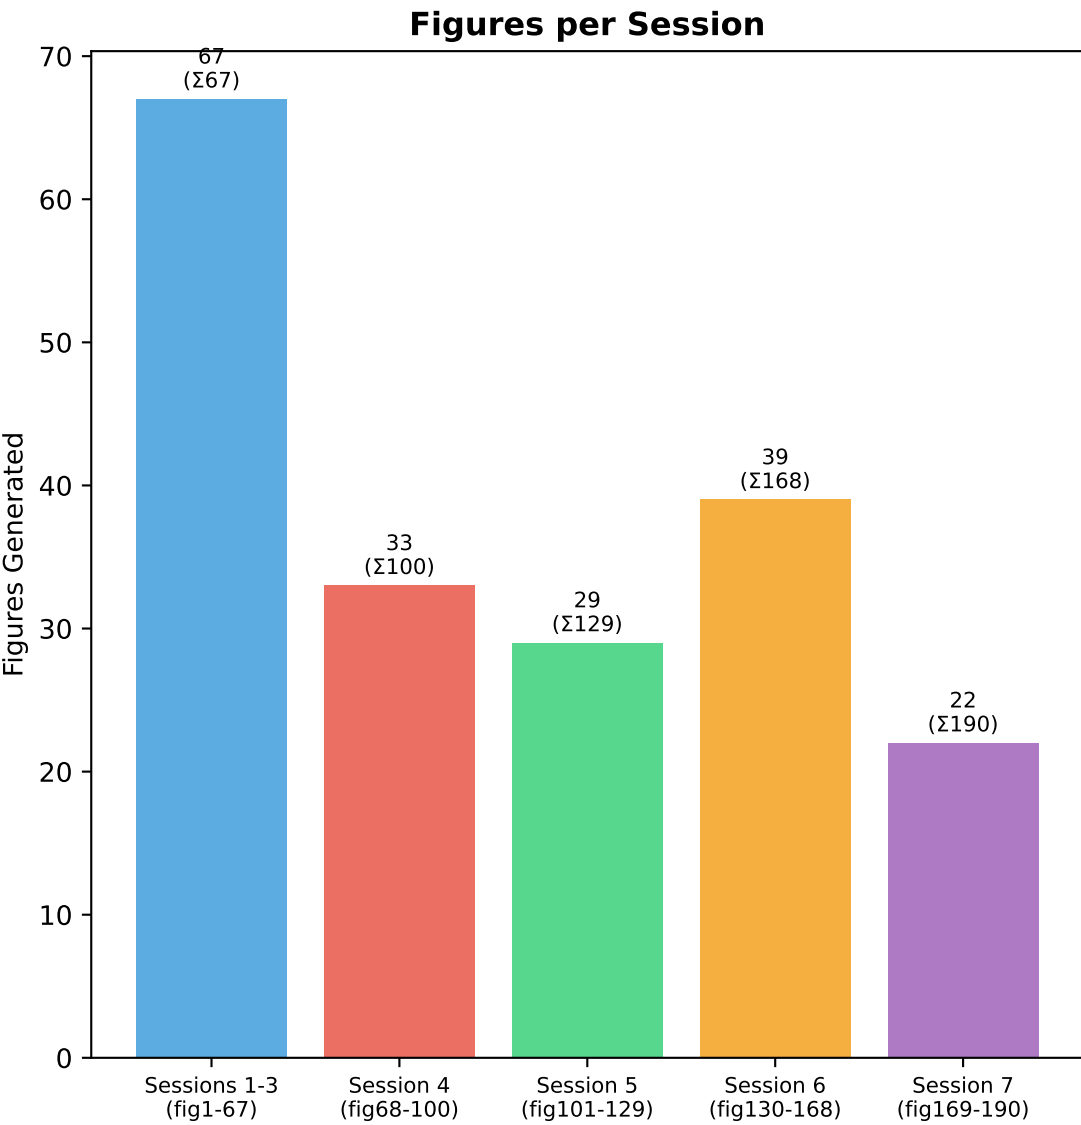

Fig 190: FANNO-Dev Grand Summary — 190 Figures Across 7 Sessions

FANNO-Dev Deliverables

- 190 Publication-Quality Figures
- 27 LaTeX Tables
- 75+ JSON Analysis Reports
- 153,351 Cleaned Samples
- 211K Raw Samples Generated
- 2,366 Unique Domains
- \$2,245 Total Estimated Cost
- 160+ Git Commits

10 Key Claims with Quantitative Evidence

1. Vendi Score 182.75

Highest reported for synthetic instruction data

3. Self-Inversion discovers domains

2,288 exclusive domains (99.1% unique)

5. K-Center-Greedy +33%

Best selection strategy at small N

7. PR-Vendi r=0.970

Participation ratio predicts Vendi

9. Self-Inv best bridge

Exits in 1.4 random walk steps

2. 8 complementary pipelines

Cross-source distance 0.961 (near-orthogonal)

4. Scaling law R²=0.996

$V(N) = 55.4(1-e^{-N/745}) + 109.0$

6. DocQA most isotropic

Uniformity 0.961, best composite rank

8. Zero contamination

0 matches across 5 benchmarks

10. \$15.58/1K cost

Total \$2,245 for 153K samples

Session 7 Highlights (fig169-190):

Vocabulary: 69K words, 2.2K core

Response format: 9 distinct types

Readability: grade 7.3 - 15.1

Density-diversity: r = -0.724

Isotropy: DocQA > all others

Random walk: Self-Inv exits 1.4 steps

Graph: Creative 95.3% isolated

Bootstrap: rankings very stable

Mixing: Self-Inv 3.2%→11% optimal

Main figure: 200dpi publication-ready

Total: 190 figures completed!
